Controlled undefended comparison: ASR vs feat_scale, by stealth projection
(same victim & ZO optimizer; projection = direction/shape, feat_scale = magnitude; 3 seeds × 3 folds)
PROTEINS (victim acc 0.73) — edge budget = 1 (sparse)
PROTEINS (victim acc 0.73) — full-edge
ENZYMES (victim acc 0.34) — edge budget = 1 (sparse)
ENZYMES (victim acc 0.34) — full-edge
Attack Success Rate (undefended)
feat_scale (injected-feature magnitude)
